Abstract / 摘要

MT翻译

Traditional Chinese medicine fasting therapy is a new, safe and effective clinical therapy. Because it can reduce weight and insulin resistance and alleviate diabetes symptoms, it can be used to treat type 2 diabetes with obesity, metabolic syndrome and other diseases. To promote people's understanding of traditional Chinese medicine fasting therapy, this case report reports the treatment process of a patient with type 2 diabetes who underwent traditional Chinese medicine fasting therapy, and discusses the efficacy and some adverse reactions.
