Abstract / 摘要

MT翻译

To summarize the rescue experience of a patient with left adrenal pheochromocytoma crisis in the emergency department. The patient came to the hospital due to palpitation and chest tightness. After early and rapid identification in the emergency department, opening the green channel process, and close cooperation in the rescue process, the conditions which presented with paroxysmal hypertension and chest and back pain during the emergency department were controlled and the patient was successfully transferred to the department for further treatment.
